

DIGITAL LITERACY PROJECT

Name: Devikhaa Raj S

Registration Number: 25BAS10089

Course: CSE0001 Digital Literacy

Date: 30/03/2026

INTRODUCTION

In today's digital age, technology plays an important role in education, communication, and daily life. Digital literacy refers to the ability to use digital tools and platforms effectively, responsibly, and safely. It is not only about using devices but also about understanding online risks, communicating professionally, and maintaining a positive digital presence.

This project was designed to develop practical knowledge of digital tools, online safety, and professional communication. Through different tasks, I was able to explore various platforms and understand how to use them effectively in an academic and professional environment.

TASK 1:

Digital Literacy Infographic

For this task, I used Canva to design a one-page infographic on digital literacy awareness. The infographic includes key topics such as the meaning of digital literacy, safe internet practices, useful digital tools for students, and professional online presence.

While designing, I focused on keeping the layout simple, visually appealing, and easy to understand. I used icons, colors, and short points instead of long paragraphs to make the content more engaging.

One challenge I faced was selecting the right design and organizing the content without overcrowding the page. However, this task helped me improve my creativity and taught me how to present information in a visually effective way.

TASK 2:

Student Digital Portfolio

In this task, I created and updated my profiles on GitHub, LinkedIn, and HackerRank. These platforms are essential for building a professional digital presence.

GitHub is used to store and share projects, which helps in showcasing technical work. LinkedIn is a professional networking platform where students can connect with peers, professors, and industry professionals. HackerRank is useful for practicing coding problems and improving problem-solving skills.

Over the next four years, I plan to regularly update my GitHub with projects, build a strong LinkedIn profile, and improve my coding skills through HackerRank. This will help me prepare for internships and future career opportunities.

TASK 3:

Coding & Collaboration Platforms

In this task, I explored both coding and collaboration tools. I created an account on HackerRank and successfully solved a beginner-level problem, which helped me understand basic programming logic.

Additionally, I created a Google Form titled "Digital Literacy Awareness Quiz" with five questions. This quiz can be used to test awareness among students about digital safety and practices.

I also viewed responses through Google Sheets, which helped me understand how data can be collected and analyzed.

This task was useful in learning how online platforms can support both individual learning and group collaboration.

TASK 4:

Professional Email & Etiquette

This task focused on professional communication. I wrote two emails—one requesting an assignment extension and another expressing interest in a summer internship.

While writing these emails, I followed proper email etiquette, including a clear subject line, polite greeting, structured body, and professional closing. I also created a social media checklist highlighting important do's and don'ts for responsible online behavior.

I learned that proper communication is very important in academic and professional settings. A well-written email creates a positive impression, while poor communication can lead to misunderstandings.

TASK 5:

Cybercrime Awareness

For this task, I chose UPI fraud as the cybercrime topic. I wrote a case study explaining how such frauds happen, who is targeted, and the consequences faced by victims.

I also created a prevention checklist with practical tips to stay safe online, especially while using digital payment systems. This included important points like not sharing OTPs, verifying transactions, and using secure apps.

While working on this task, I was surprised by how easily people can become victims of cybercrime. It made me more aware and cautious about my own online activities. I will make sure to verify all digital transactions and avoid sharing sensitive information in the future.

CONCLUSION

This project provided valuable learning about digital literacy, online safety, and professional communication. It also helped me gain hands-on experience with tools such as Canva, GitHub, LinkedIn, HackerRank, and Google Forms.

Overall, this project has improved my understanding of how to use digital technologies responsibly and effectively. These skills will be very useful for my academic journey and future career.
